Identity - Growth - Relationships

YourOS

CONFIGURATION HANDBOOK

By: Adriano Fontanari

YourOS Configuration Handbook

Introduction - the Promise of YourOS

This concise handbook covers the principles of how YourOS was built as well as its core components and configuration. The guide is complementary to the YourOS Essentials and YourOS Configuration videos.

YourOS was born out of a real need I was experiencing two years ago.

In a world where apps come and go, we easily end up with dozens of solutions to manage our productivity, well-being, and finances; wasting precious time in understanding what is the right tool, lately knowing its limitations, and paying for several subscriptions that do not offer what we are looking for. After a year we are again searching for another app as the company was shut down or acquired or increased their subscription costs.

As a tech enthusiast, I've tested countless note-taking apps and productivity systems. However, none of them provided a structured framework to help me reflect on and holistically manage my life. It became clear that these solutions were limited and inflexible, forcing users to conform to their pre-set structures. This realization was not unique to me; many others were experiencing the same frustrations.

Many productivity users start with the belief that there is the right way to do things and end up wasting a lot of time building up systems that clutter their lives. The honest answer is that there is no such system. The world constantly, changes, we change and so do our way of doing things.

As an example, many users who find out about obsidian are easily overwhelmed by its potential and get lost in thousands of tutorial videos on YouTube with complex and unnecessary customizations. And get even more overwhelmed.

Having a decade of experience in the digital health industry, I combined my product management and data analytics skills to create YourOS, a robust and future-proof framework designed to help individuals manage their lives effectively. YourOS is the result of two years of continuous research and practice during which I carefully tested and selected the best tools that followed these principles.

It follows the Japanese philosophy of Shurari: i. learn the foundations, ii. make innovation, iii. go your own way.

Before moving to step II. and iii., whereas many people start and fail, we will cover what are your needs and the functional requirements of a unified system. So that the system is flexible to achieve our goals.

Between buying a solution or building it, YourOS is in the middle. It will provide a packaged system with the theory to configure and edit it so that you will create your perfect system.

Now, I'm thrilled to share YourOS with the world, as it has brought contentment and purpose to my life, I hope it will do the same to thousands of others.

Fun Fact: In the process of building YourOS I become a marathon runner :)

YourOS is made possible by the amazing Obsidian Team and the community plugin creators, consider supporting also them.

For any questions or recommendations feel free to contact youros.configuration@gmail.com. Kindly note that depending on the volume of emails it may take several days to get an answer.

YourOS Dashboards

On Setting the Right Expectations: **Configuring YourOS will around 30-45 minutes**, while taking advantage of all the pages included in the system may take a few weeks.

Introduction

YourOS Dashboards are an integral component of YourOS and allow you to easily keep track of and monitor your well-being and financials. Kindly note they require a bit of configuration explained in the next section.

As a simplified version of a recent [Harvard Study](#)] on the areas of our lives, YourOS is structured into six core dimensions: Health, Mindset, Identity, Financials, Relationships and Growth.

The idea with well-being analytics is not to objectively and scientifically define each dimension but to track the trends to identify areas that require more attention, both in terms of dimensions and habit tracking.

The user will have to fill out a quick well-being survey every day + log each transaction via the form. Transactions can also be added directly in the Google sheet file (e.g. every week). I recommend doing it regularly to have the financial data expenses.

The questionnaire is subjective and takes about 30 seconds to complete, after some practice. It is designed to be a quick tool that provides a snapshot of well-being according to the 80/20 principle.

As it is a customizable approach, the questionnaire can be designed to be completed daily, weekly, or monthly (for those with less interest but still want to have some high-level data). Before applying changes to the question I recommend configuring the system as presented in the next section to get some familiarity.

The idea is that combining quantitative (AWB) and qualitative dimensions allows for a more complete and accurate view.

How metrics are computed

YourOS estimates a Well-Being Score (YWB) as a simple average of each dimension. Each dimension (Health, Mindset, Identity, Financials, Relationships, Growth) is equally valued: given a 100 AWB score, each dimension is worth 16.67%.

Each variable within each dimension carries equal weight. For example, if a dimension has 5 questions, each question counts for 20% of the dimension. This is because it is difficult to say, for example, whether mood weighs more or less than sleep quality (it is therefore a simplification).

Health is an exception, with a score consisting of 50% Heart Rate Variability (HRV) and 50% subjective questions. This HRV is used as a proxy of the general well-being of a person (Reference [Harvard](https://www.harvard.edu)). If people do not have trackers and would like to measure their HRV I suggest checking out the HRV4training App (<https://www.hrv4training.com/>)

Configuration Guide:

The YourOS Configuration Video is an integral part of this section.

The YourOS Dashboards works as follows: a Google Form questionnaire is connected to a Google Sheet, which in turn is connected to Google Looker Studio for data visualization. This allows integration via iframe to Obsidian - YourOS Vault and full long-term control over the data (effectively, it is an Excel file that can be uploaded to any data visualization tool even in a few decades).

The system consists of 14 components:

- Google Form (2): YourOS Well-being Form, YourOS Financial Transactions Form
- Google Sheet (3): YourOS Well-Being, YourOS Financials, YourOS Insights Home
- Google Looker (9): YourOS Well-being Insights (Home), YourOS Well-being, YourOS Financials - Home, YourOS - Trends, YourOS - Habits, YourOS Well-being Longitudinal Insights, YourOS Well-being Insights - days of the week, YourOS - Financials, YourOS Well-being - daily insights
- **App Scripts (included in the dashboards)**

The configuration should take around 30-45 minutes. I understand it may look a bit technical, and I tried to simplify the passages as much as possible, in case

anything is not clear feel free to reach out with your question (email: youroos.configuration@gmail.com).

Unauthorized distribution of the links is strictly prohibited

Name	Type	Link
YourOS Well-Being	Google Sheets	Link
YourOS Financials	Google Sheets	Link
YourOS Insights Home	Google Sheets	Link
YourOS Well-being Insights (Home)	Google Looker	Link
YourOS Well-being	Google Looker	Link
YourOS Financials - Home	Google Looker	Link
YourOS Trends - Home	Google Looker	Link
YourOS - Habits	Google Looker	Link
YourOS Well-being Longitudinal Insights	Google Looker	Link
YourOS Well-being Insights - days of the week	Google Looker	Link
YourOS - Financials	Google Looker	Link
YourOS Well-being - daily insights	Google Looker	Link

Current Limitations:

- The System does not accept transactions for future dates
- The Value of a stock is downloaded once a day
- Bank Transfers are not reconciled meaning that if the user sends a bank transfer from Account A and Account B he will need to record two transactions. Note: the Transfer Category is computed neither as an expense nor a category.
- YourOS is best suited for individual investors who possess a few securities as the configuration and management of several securities in YourOS may be impractical. In this scenario, people may want alternatively to create an investment account in YourOS and only update the balance at a specific timeframe (e.g. once a week), simply by logging the variation of the account balance. In other words, the investment account would work like a Wallet account (without the automatic download of the market price of the securities).
- in the case of investment securities, to get the updated net worth of the day you need to log at least one transaction

Configuration details

This section complements the configuration video by providing additional information on the configuration. For design customisation see the advanced configuration guide.

1. YourOS Well-being Form

This is the 30-second well-being survey to be filled every day. The user will need to create a Google form in the same format as the following. Refer to the file "YourOS Surveys.xlsx" when creating the survey.

Growth

A reading/study habit could be 30 min per day

	Yes	No
Did you study/read a book or learned practical skills today?	☐	☐
Has your network increased today or have you consolidated professional relationships?	☐	☐

Relationships: How much are you satisfied with your current relationships (e.g. family, love, friends)?

Did you feel alone? Do you feel appreciated (can include work)?

1	2	3	4	5
☐	☐	☐	☐	☐

- Daily discretionary spending = $x/30$

	Yes	No
Daily discretionary spending (not exceeded)	☐	☐
Financial Runaway >12 months	☐	☐

- Users may find it interesting to know more about their strengths/weaknesses to evaluate daily in the survey. There are many validated personality tests,

e.g. the DiSC assessment.

2. YourOS Financial Transactions Form

This survey is necessary to log financial transactions. The user will need to create a Google form in the same format as the following. Refer to the file

"YourOS Surveys.xlsx" when creating the survey.

3. YourOS Well-being insights (Home)

This dashboard is displayed on the Home Page.

The metrics in the YWB General Dashboard refer to the trend of the past 7 days compared to the previous 30 days.

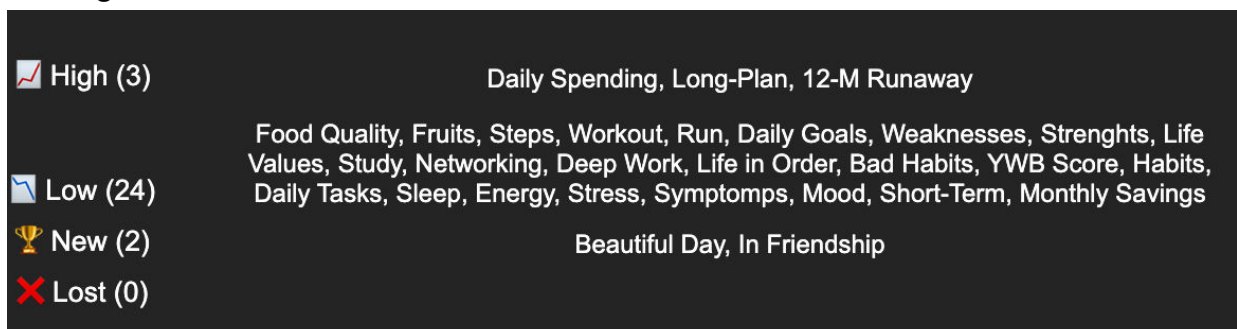

Each dimension has categories based on the score:

- Max if dimension score $\geq 90\%$
- High if the dimension score is between 80 and 90
- Midi if the dimension score is between 60 and 80
- Low if the dimension score is between 50 and 60
- Min if the dimension score is below 50

4. YourOS Trends - Home (Excel)

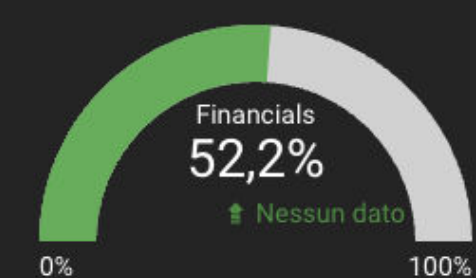

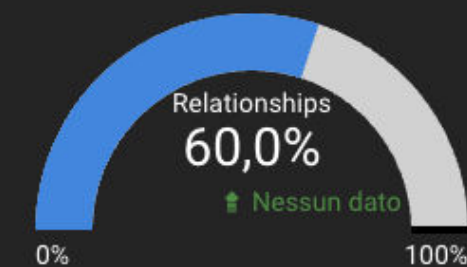

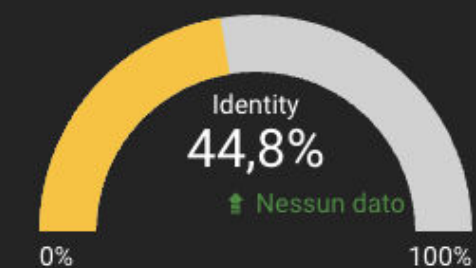

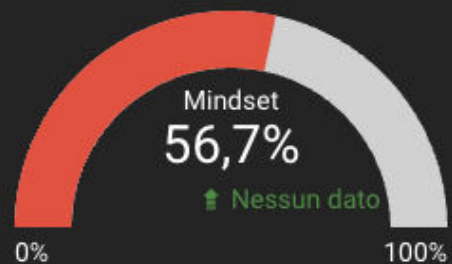

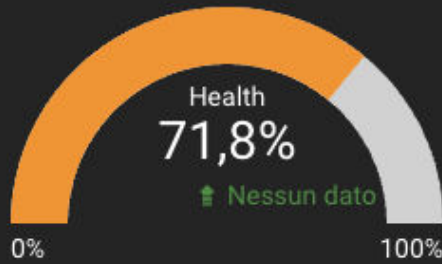

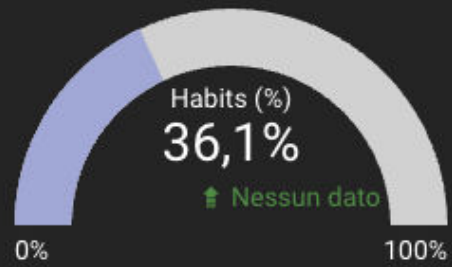

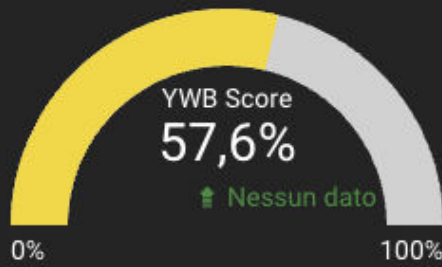

This view is displayed below the YourOS YWB Home Dashboard. It shows the high/low metrics as well as new and lost achievements.

5. YourOS Wellbeing

This dashboard shows the Average value of well-being dimensions (variable) as well as the habit adherence in the last seven days (fixed)

30 dic 2023 - 28 gen 2024

Workout

Fruits

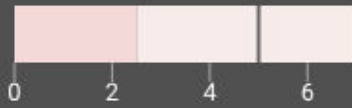

Steps

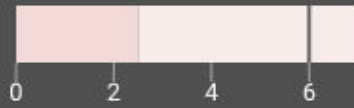

Run

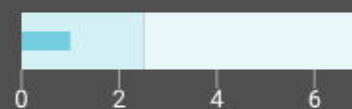

Deepwork

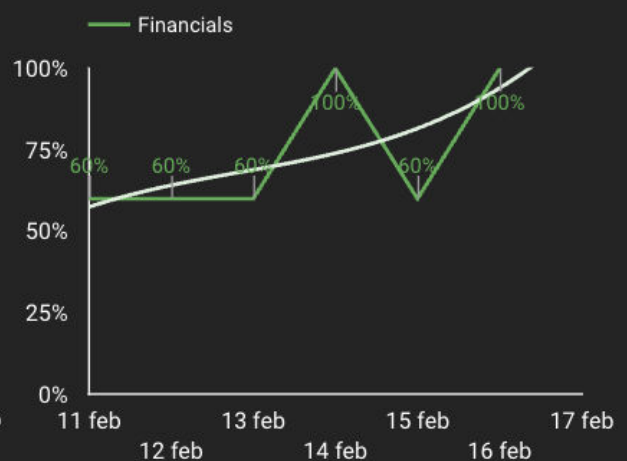

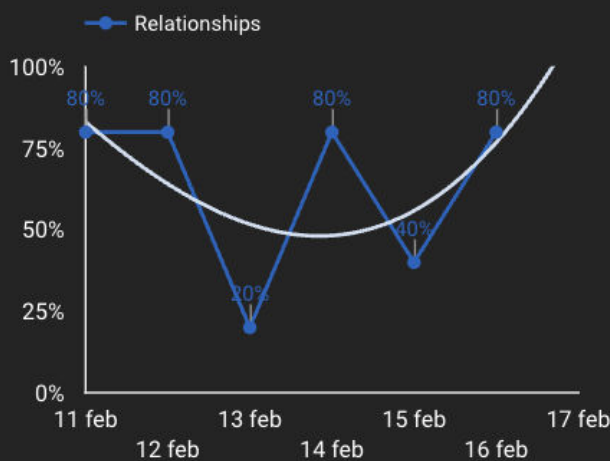

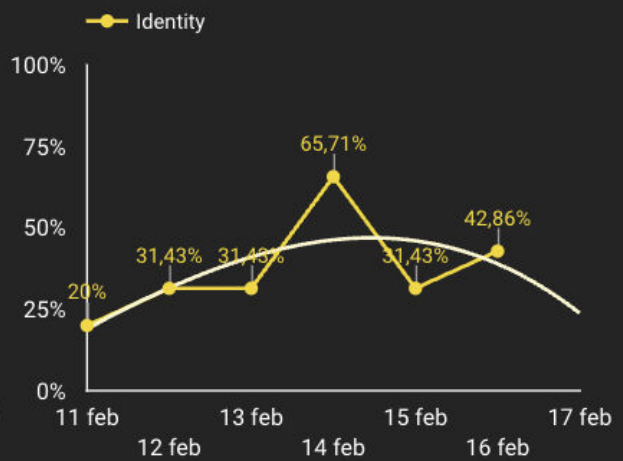

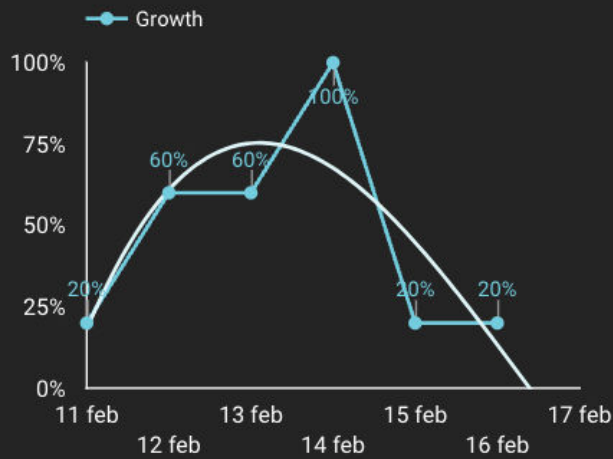

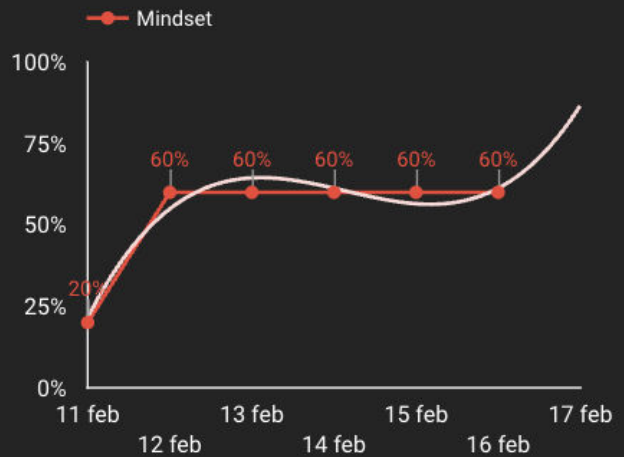

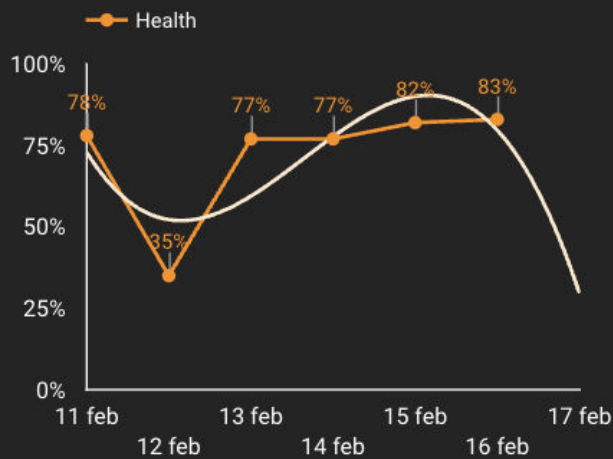

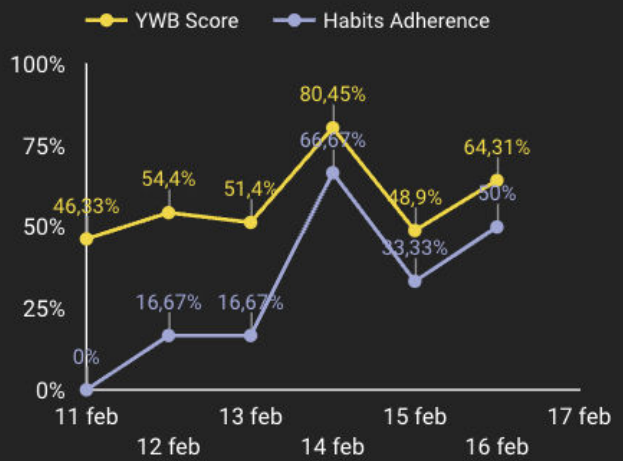

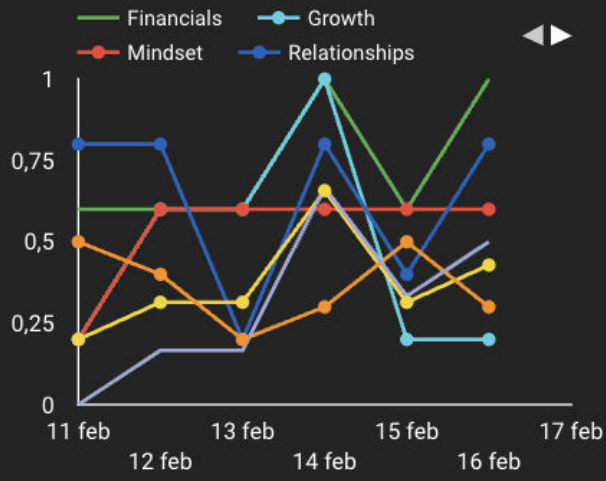

Goals

Study / Read

6. YourOS Leaderboard (excel)

This view shows the well-being badges. Badges are structured into four levels:

- red (min level): adherence below the required level in the last 3 days
- orange: adherence above the required level in the last 3 days
- purple: adherence above the required level in the last 7 days
- green: adherence above the required level in the last 30 days
- yellow (max level): adherence above the required level in the last 120 days

It is possible to edit the badge name, adherence levels (column Rule), and timeframes in the sheet Badges of the YourOS Well-being spreadsheet.

My recommendation is to review the adherence levels after a few months of using YourOS.

7. YourOS - Trends

The Trends dashboard shows the average score of the dimensions over

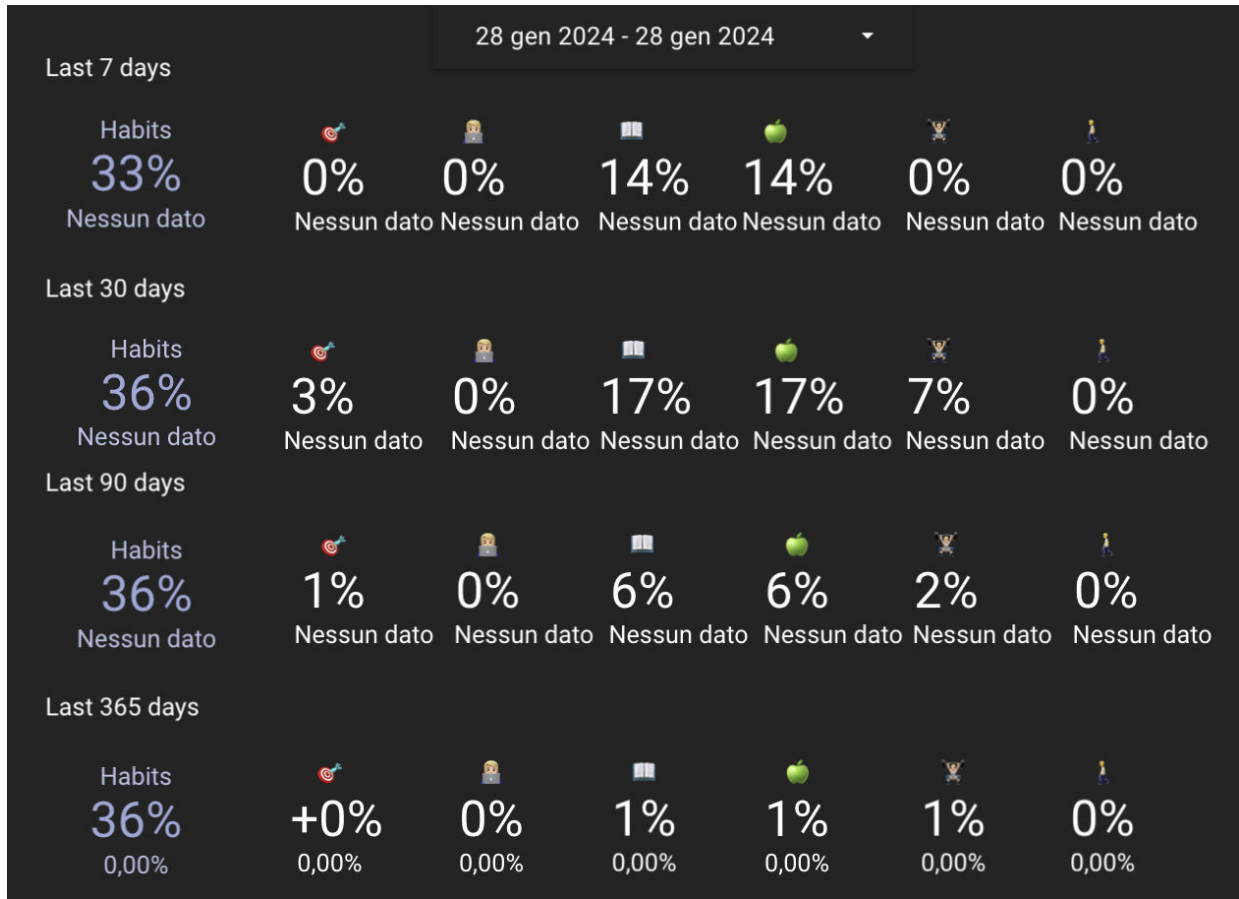

different timeframes.

8. YourOS - Habits

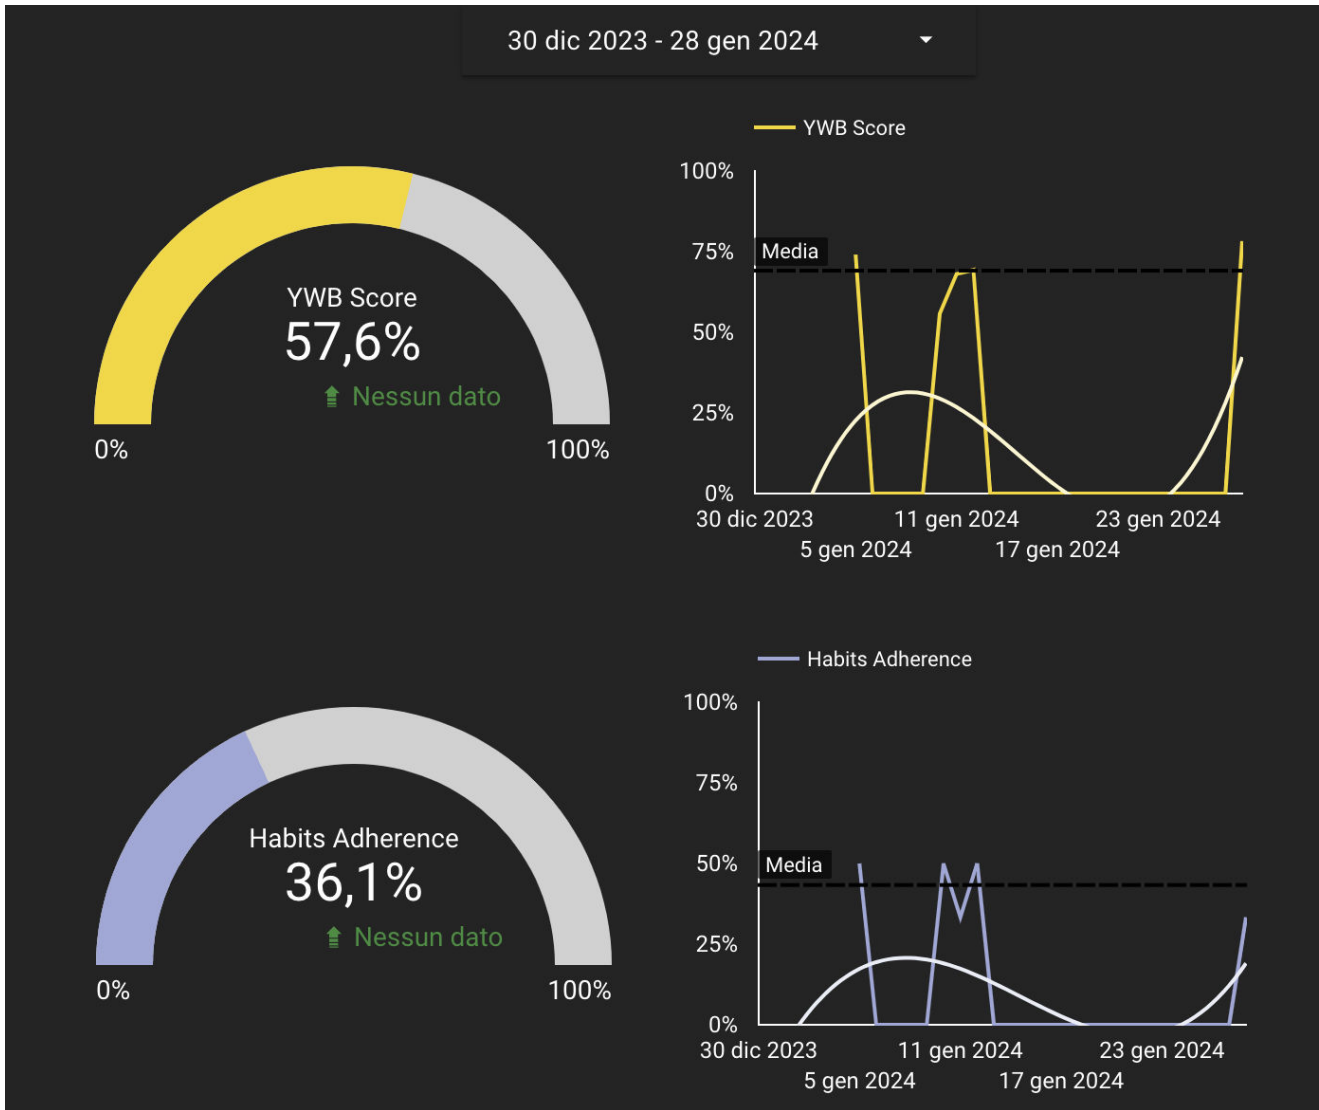

The Habits dashboard shows the average score of the habits over different

timeframes

9. YourOS Well-being Longitudinal Insights

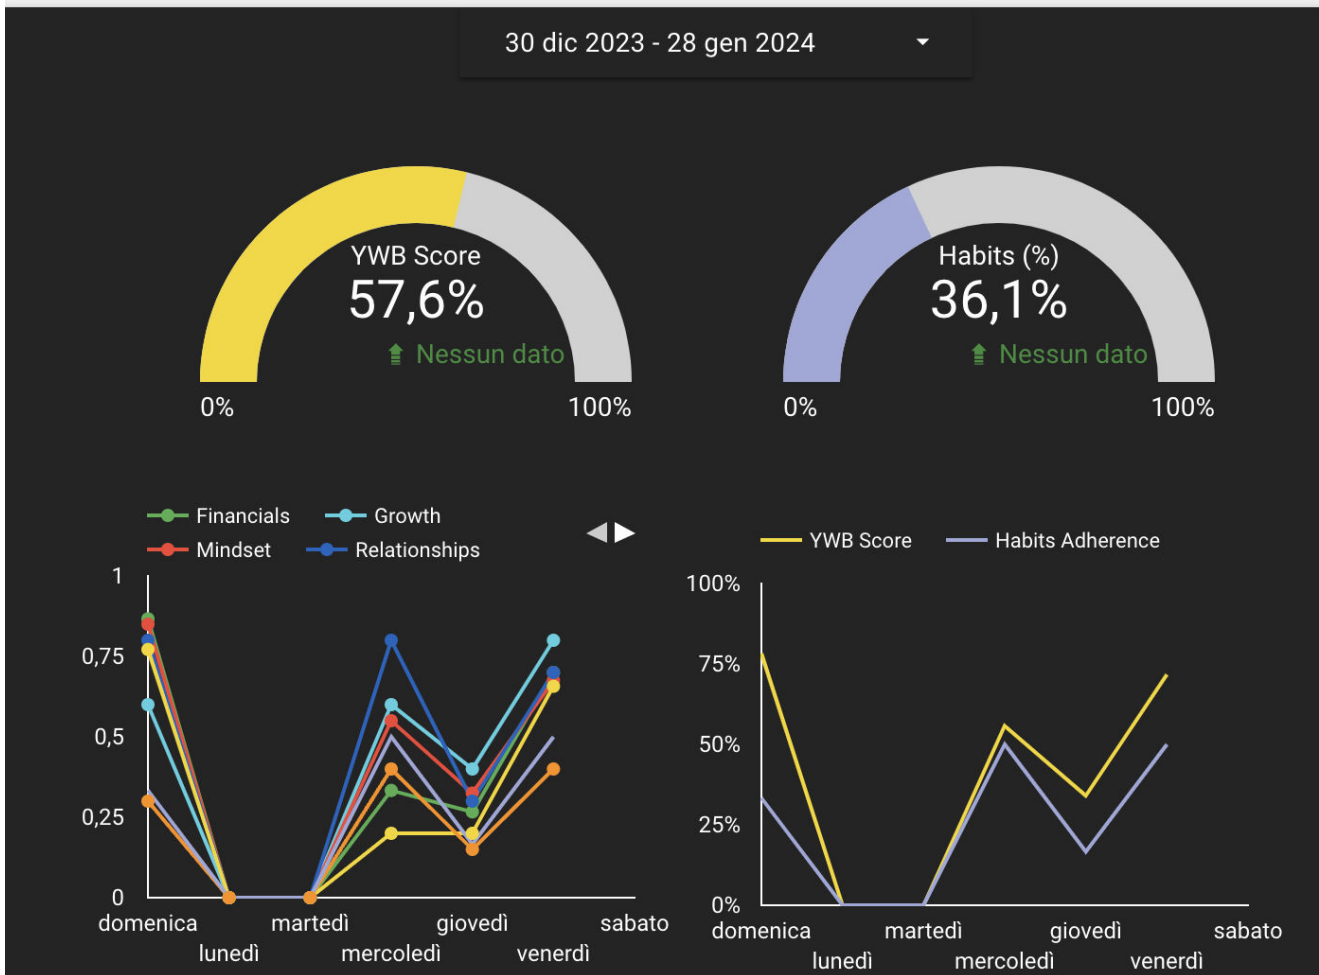

This dashboard shows the score of the Well-being dimensions and sub-dimensions by calendar date.

(Excerpt)

10) YourOS Well-being Insights - days of the week

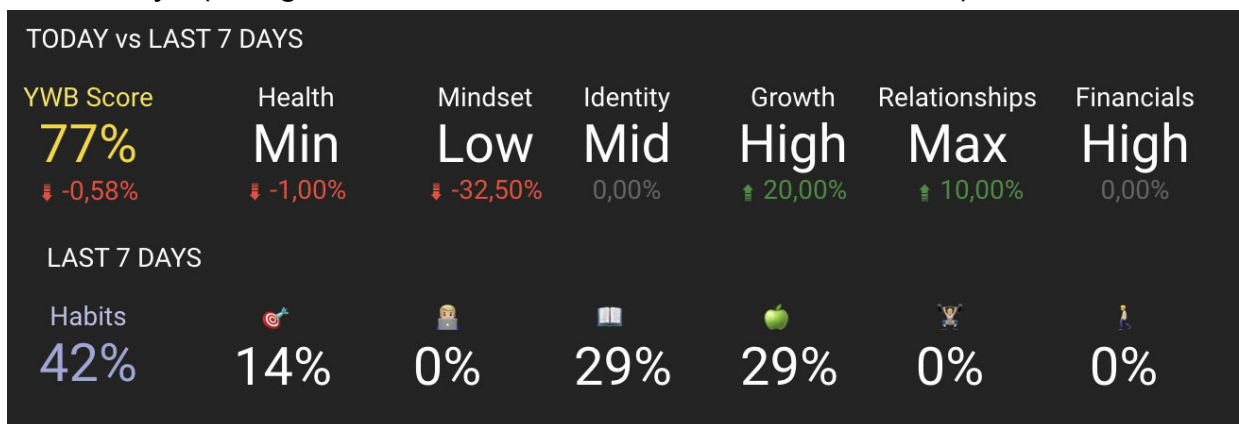

This dashboard shows the score of the Well-being dimensions and sub-dimensions by days of the week (average). For instance, it can answer the question: is my mood high or low during the weekends?

(Excerpt)

11. YourOS Well-being - daily insights

This dashboard shows today's well-being scores vs the average of the past seven days (along with the habit adherence in the last week)

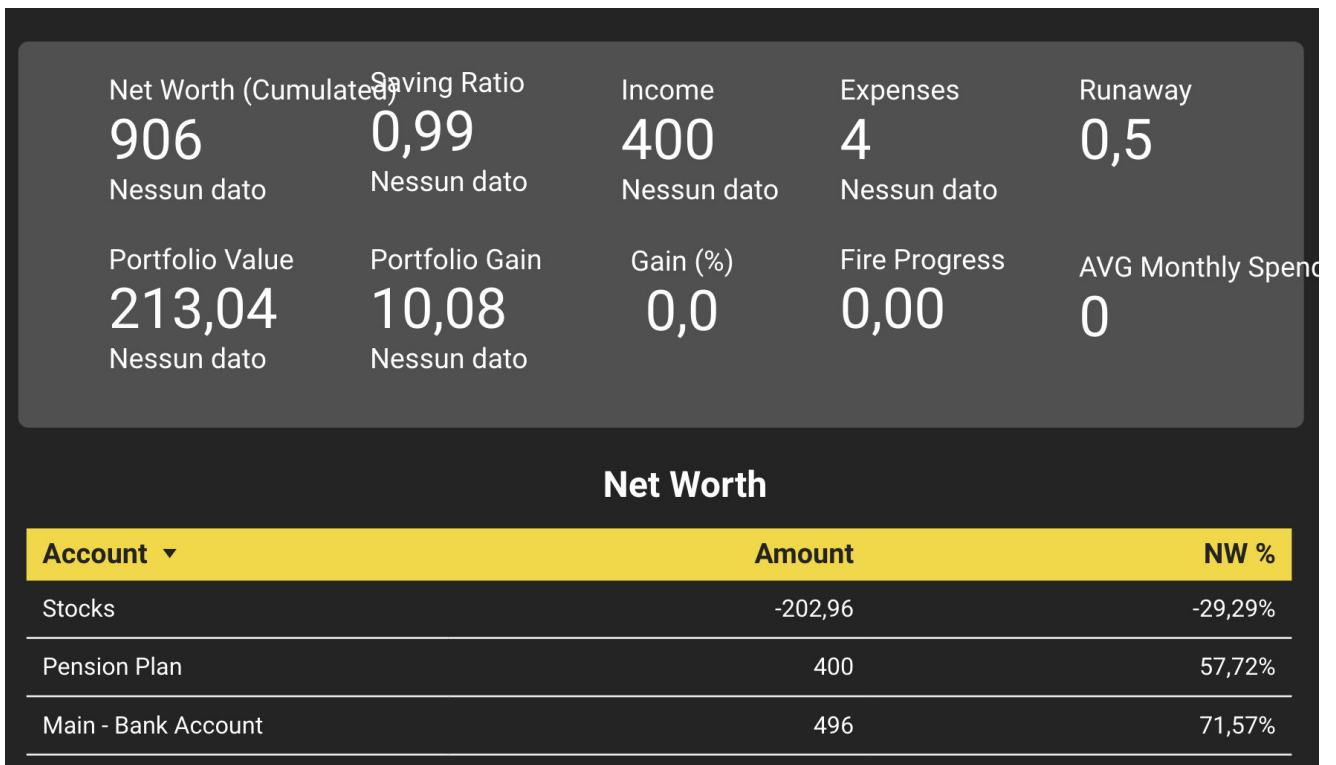

12. YourOS Financials - Home

This dashboard shows high-level personal finance metrics, such as expenses, income, savings, and latest transactions.

(Excerpt)

13. YourOS - Financials

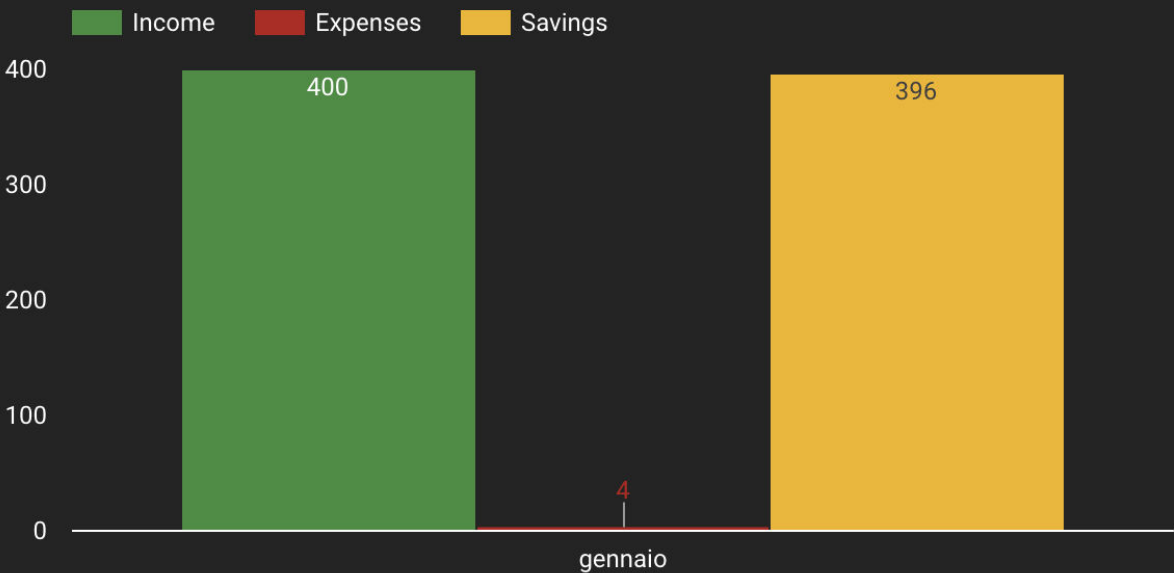

This dashboard provides comprehensive personal finance monitoring, over net worth composition and trends as well as investment tracking.

Fields to be created in Google Looker

Warning

The Formulas presented are functioning. However, when copying the formulas into Google Looker, you may need to delete and add the "" signs as well as remove additional spaces. If errors are prompted, try to rewrite the formulas instead of copying them.

1. Expenses

```
SUM(CASE
  WHEN Amount < 0 THEN Amount
  ELSE 0
END)
```

2. Net Worth (cumulated)

```
IF(FIRST(N. of Shares (VWCE)) = 0, FIRST(Amount total),
FIRST(Amount total) + FIRST(N. of Shares (VWCE)) * FIRST(Current
Value (VWCE)))
```

3. FIRE Progress (Financial Independence Number)

"FIRE Number" is a value (e.g. 3000000)

```
Net Worth (cumulated)/"FIRE Number"
```

4. Income

```
SUM(CASE
  WHEN Amount >= 0 THEN Amount
  ELSE 0
END)
```

5. Portfolio Value

(value of my investment securities)

```
first (N. of Shares (VWCE)) * first (Current Value (VWCE))
```

6. Runaway

(for how many months do I have money left considering my monthly average spending)

```
Net Worth (cumulated)/(Expenses/30)
```

7. Saving Ratio

(how much money I saved in a period)

```
(Income+Expenses)/Income
```

8. Gain (%)

```
((first(Shares VWCE (Cumulative))*first(Current Value  
(VWCE)))+first(Amount Invested))/first(Amount Invested)*(-1)
```

9. AVG Monthly Spending (yearly average monthly spending)

```
SUM(CASE  
  WHEN Amount < 0 THEN Amount  
  ELSE 0  
END)  
*(-1)/365*30
```

10. Portfolio Gain

```
(first(Shares VWCE (Cumulative))*first(Current Value  
(VWCE)))+first(Amount Invested)
```

Correct Fields Type Configuration (Key Dashboards):

Advanced YourOS Configuration (for PRO Users)

This Bonus section includes ideas for an advanced YourOS Configuration.

A current limitation of YourOS Financials is that it does not support future transaction dates. In the case of investment securities, to get the updated net worth of the day you need to log at least one transaction.

On Heart Rate Variability and Edit the wellness questionnaires

By default, the YourOS Well-being form includes the measurement of the Heart Rate Variability. If you would not like to measure it, follow these steps:

1. delete the question from the Google form
2. access the Google spreadsheet YourOS well-being, go to the sheet Answers, select the cell AO2, and edit it as shown
3. In case you edited the well-being survey and would also like to change the achievements, go to the Badges sheet of the YourOSO well-being spreadsheet and update the fields accordingly. For example, you may want to change the adherence level required to unlock the achievement (column Rule) or change the name of the name of achievement. We saw how to remove the heart rate variability measure. With the same logic, it is possible to edit the well-being questionnaires by adding or removing new questions. The best way to do so is not by deleting columns with the discarded questions from the Google sheet but by first adding the questions to the Google form. Google Forms will automatically add a column to the YourOS Well-being Google sheet that can be used as input. When you add new questions remember also to review how each dimension is computed in the Answers sheet, and the badges sheets by updating reference cells of the column Level - Today and Level- yesterday and the name of the new variable in the biggest orders sheet. finally, go to Google Looker data sources and update the fields of the answers sheet.
4. How to add stocks or bonds: Securities can be added manually as a transaction. To do so, access the YourOS Financials Spreadsheet, go to the Transactions sheet, scroll down to the bottom of the page add manually the date, the account, and the category should be investment securities or investment pension fund (these are not computed as expenses). Add to column H the number of shares and in column I the unit cost

How to add more than one Investment Securities. By default, YourOS includes the VWCE ETF. The way YourOS tracks each stock is the following:

- Transactions sheet columns H and I to add the N. of shared and individual Unit cost. This means that we will need to manually add two rows per each security we possess.
- Next, we need to create a new sheet with the name of the security (e.g. VUAA:LON for the Vanguard S&P 500 ETF)
- The next step is to go to the New Transactions NW sheets and add four columns:
 - N. of Shares (VUAA:LON) taken from the transactions sheet
 - Current Value (VUAA:LON) retrieves the info from the VUAA:LON sheet

- Unit Cost (VUAA:LON) taken from the transactions sheet
- Shares VUAA:LON (Cumulative): includes N. of Shares (VUAA:LON) and the date
- VUAA:LON Amount Invested is the N. of Shares (VUAA:LON) times the Unit Cost (VUAA:LON)
- Remember to also update the Amount Invested column to include the new security
- Now go to the Portfolio Breakdown and add the security information
- Afterwards, we need to go to App Script, copy the get price script, and create a new one, this time by changing the name of the destination sheet and ticker (in this case VUAA:LON), we will do the same for the price today script. Remember to change the function get price and price today with a different name
- we will also have to set up the two triggers for the new functions to be downloaded
- the final step is to go to data sources of the YourOS Financials - New Transactions NW sheets in Google Looker, update the fields edit the formula to also include the new security, the fields to be updated by adding up the new security are Gain, Net Worth (Cumulated), Portfolio Gain and Portfolio Value

YourOS is best suited for individual investors who possess a few securities as the configuration and management of several securities in YourOS may be impractical. In this scenario, people may want alternatively to create an investment account in YourOS and only update the balance at a specific timeframe (e.g. once a week), simply by logging the variation of the account balance. In other words, the investment account would work like a Wallet account (without the automatic download of the market price of the securities).

When you add a new stock you may want to update the Diversification - Holdings and Diversification Sector. This information is available on the official website of each security and can be added manually to YourOS by adding new columns updating the & fields and including ti

On Design customisations:

- YourOS components are designed for the dark mode, changing it might alter how it is displayed. YourOS is using the Minimal theme and additional customizations:

- Main colors: - background: #242424; - secondary color #F5D70B .
- Obsidian Only: The Style.css file of the Custom Frame Plugin has been edited to be consistent with the theme: background-color: #242424;
- To edit the order of the icons in the ribbon see the custom-menu-order css snippet
- To change the icons in the ribbon you may need to encode an svg file: <https://yoksel.github.io/url-encoder/>

On Dashboard Customisations

You can change the background of the dashboard in Google Looker: In the menus, select Page > Current page settings, then on the right, select STYLE. By default is set to #242424 as the main background color of YourOS.

In the custom frames plugin the following snippets have been added to fit the main theme:

- Google Forms (YourOS Well-being + YourOS Financial Transactions)

```
.D8bnZd {
  background-color: #242424 !important;
}
.RVEQke {
  background-color: #F5D70B !important;
}
```

- Dashboards:

Conclusions: YourOS Manifesto

I hope YourOS will help you achieve your ambitious goals, find contentment, and live a fulfilled life while reflecting on your journey.

YourOS is made possible by the amazing Obsidian Team and the community plugin creators, consider supporting also them.

For any questions or recommendations feel free to contact youros.configuration@gmail.com. Kindly note that depending on the volume of emails it may take several days to get an answer.

Appendix

This appendix includes the transcript of the YourOS Video. These can be used as an additional reference

YourOS Configuration Video:

Hi and welcome to the YourOS Configuration Video, in this guide, we will see how to configure the dashboards included in YourOS.

YourOS allows you to keep track of your financial and well-being analytics, making this information always available.

But, How does it work in practice?

YourOS uses Google Forms as a way to input financial transactions and well-being daily data. the surveys are linked with Google Sheets where the data are stored. Finally, the spreadsheets are linked to custom Google Looker dashboards to visualize the data.

The dashboard is displayed in YourOS Obsidian Vault via an embed of the URL.

As a premise, to make the system work properly you will need to access your Google account from Obsidian. If you have security concerns, I would recommend creating another Google account for the YourOS dashboards.

In this short video, we will see how to set up the system. It might look a bit technical but it is once in a life process. Make sure to follow the steps as presented to ensure a correct configuration.

To open the YourOS Vault, download the Obsidian app from the official website. Next, open the YourOS Vault making sure to enable the plugin from the pop-up message. We will now see how to configure the dashboards. If you are a Notion user the same steps presented in this video do apply. The only difference will be to add the URLs of the Google Forms and Google Looker Dashboards as an embed into your notion pages instead of in Obsidian.

The first key step is to create the Google surveys. Unfortunately, this part requires a bit of copy and paste as we are going to replicate the surveys included in the configuration handbook. To access Google Forms and create a new survey. Copy and paste the list of questions as shown in the handbook. In the video, we now see how to copy a few of them. Make sure to select the correct type of questions and do the same for all the questions.

We will now see as an example how to create the date and heart rate variability questions. As per the heart rate variability, we have three options: Balanced, Unbalanced, and Low.

configured as presented in the handbook

Remember to rename the form as YourOS Wellbeing.

After setting up the well-being survey, we do the same for YourOS Transactions. A proposed list of transaction categories is included in the handbook

At the end of the process, the survey should be as presented in the Handbook.

Click on the Preview Button Icon on the top right to verify the form has been correctly

We now access the links of the three Google Sheets included in the YourOS handbook.

From the top bar menu click, File, Create a Copy, and Click Create a Copy. Rename the sheet as YourOS Financials YourOS Well-being and YourOS Trends - Home respectively. During the process, a few Google App Scripts will be copied. These scripts are essential to guarantee the correct functioning of YourOS. After copying the spreadsheet Your O S Financials, make sure to copy also YorOS Well-Being and YorOS Trends - Home.

The third step is to go to the Google Forms well-being form, click on answers, and link it to the Google sheet well-being survey you have just copied. Repeat the same for your transactions survey, this time by linking it to your financial spreadsheet.

The fourth step is to go back to the Google surveys and fill both questionnaires with demo data.

This is important to ensure the survey has been correctly configured.

For the fifth step, we will now update the fields of the spreadsheets to support the newly created Google forms. To do so, go to the YourOS Well-being Spreadsheet, and rename the new sheet linked with the Google form indicated by a purple icon as Form Responses.

Finally, access the Answers sheet, select all the columns and rows, and from the menu click on edit find and replace, in the find field write *configure*, and in the replace field write Form Responses, with an apostrophe at the beginning and end as shown in the video.

Make sure to tick the option search in the formulas and then click replace all.

Repeat this step for the badges sheet. Finally, do the same for the Financials Spreadsheet, and this time by renaming the new sheet as Transactions and replacing the word configure with 'Transactions' in the New Transactions NW sheet. Add the fields N. of Shares (VWCE) and Unit Cost (VWCE) as Column H and Column I in the Transactions sheet.

Remember to add an apostrophe at the beginning and end as done for the Form Responses.

Finally, access the YourOS Trends - Home spreadsheet, select all the columns and rows, and from the menu click on edit find and replace, in the find field write configure, and in the replace with the URL of the YourOS well-being spreadsheet. This time an apostrophe is not needed.

Make sure to use the URL of your spreadsheet and not one of the ones shown in the video.

Sixth step: We are almost there, to finalize the Spreadsheet configuration we now need to configure the scripts. As per the other parts, we will do it for both Spreadsheets (the financial and well-being ones).

So go to the well-being sheet spreadsheet, and click on extensions, and app scripts. This script reorders the values based on the date and guarantees the data displayed in the dashboard is sorted by date. Click on the run/execute button and authorize the script from the popup message.

Next, go to triggers, create a new trigger, choose sort responses, as the function, and in the type of event select when the form is submitted. Finally, authorize the trigger as done before for the scripts.

For the YourOS Financials Spreadsheet, we will do the same. This time we have two more scripts Get Prices and Prices today. These scripts download the latest price value for the Stock VWCE and add it to the sheet VWCE. Run the scripts individually and authorize them from the popup message.

Then need to go to activators and create three activators. One with the get price function, based on time and we set a time (e.g. at noon). The other two are sort of responses and prices today that are activated when the module is submitted.

So essentially, Google Sheets will download the latest price value for VWCE every day, and copy it when we submit a form. It will then order the transactions by date.

Additional considerations on how to configure your investment securities, such as stock or bonds, are included in the configuration handbook.

Seventh step: we will now configure the Google Looker dashboards. To do so, go to the lookerstudio.google.com and activate your free account by filling in the required information.

Once done, click on the Create button, data sources, Google Sheets, and authorize Google Looker to access your Google Sheets.

We will now add the fields from the Google Sheets we created before. Select the YourOS Well-Being sheet answers sheet. From the list of fields make sure that the field type for the YourOS well-being score, core YourOS Dimensions (Health, Mindset, Growth, Relationships, Financials, Identity), and habit adherence is the percentage. In case it does not, click on the type field, and from numbers select percentage. After that click the explore button on the top right.

Now we do the same for the financial data. Go back to Google Looker, click on click on the Create button, data sources, Google Sheets, YourOS Financials and select New Transactions NW. Click on the add a field, add a calculated field, and create ten fields by copying the formulas included in the "Fields to be created in Google Looker" section of the YourOS configuration handbook. In this guide, we will do it for one field as an example.

Once you created a field click on the save button and after creating the ten fields click on explore. Note some fields require some input from your side, such as a financial independence number or daily discretionary spending value.

Next, we add the remaining Google sheets of the Financial Spreadsheet as data sources, the same way we did for New transactions NW and Answers. This time we do not need to create new fields. Once each sheet has been added, click on the explore button; go back to Google Looker, and add another sheet as a data source (Important: add all the sheets as data sources)

The eighth step is about copying the dashboards. To do so access the link of the dashboards included in the YourOS configuration handbook. Per each dashboard click on the hamburger menu to create a copy.

We will start with the YourOS Financials Dashboard, when copying the dashboard you will be prompted to a menu, and in the new source data select the the source in the order as presented in the video.

Financials - Transactions

Financials - New Transactions NW

Financials - Diversification - Country

Financials - Diversification Sector

Financials - Asset Allocation

Financials - Portfolio Breakdown

Financials - Diversification - Holdings

Repeat the same step for the other dashboards.

For the YourOS Well-being Insights (Home) pick Financials - New Transactions

NW and YourOS-Well-Being - Answers in this order.

For the YourOS Financials - Home dashboard pick Financials - New Transactions NW as a data source

For the remaining dashboards, simply pick the YourOS Well-being - Answers and YourOS Well-being Form responses in this order.

At the end of the process, you should have nine dashboards.

Ninth step: we can now copy the link of the dashboard into YourOS. Go to the YourOS Wellbeing - insights (home) - click on embed report and copy the URL included from the windows. Make sure to copy only the URL. Next, go to Obsidian, click on the gear to access the settings, and custom frames, and paste the URL in the YourOS Wellbeing - insights (home) area.

You need to open the YourOS Vault in Obsidian.md or use Notion to add the dashboards.

Repeat the same for the remaining YourOS dashboards, paying attention that the name in Obsidian matches the name of the Looker Dashboard.

For the YourOS Trends - Home and YourOS Leaderboard we have to do a few steps more as these are Excel embeds.

Go to the YourOS Well-being spreadsheet. Click on file, share, publish on the web, embed, select leaderboard, and click on the publish button. Now copy only the URL from the window and paste it into the custom frames Leaderboard as we did for the other dashboard.

Now access the YourOS Trends - Home and Click on file, share, publish on the web, embed, select Main, and click on the publish button. Now copy only the URL from the winds and paste it into custom frames YourOS Trends Home URL area.

Finally, copy the URLs of the Well-Being and Transactions Sureys Google Forms too.

The final step is to log in with the Google account to have the right to see the dashboards from Obsidian. To do so click on the command palette and select Gmail and access your Google account. Afterwards, restart Obsidian! YourOS is finally set up!

You may have noticed that the spreadsheets YourOS Well-being and YourOS Financials already include some demo data. To start adding your information

simply cancel the contents of the cells as shown in this video.

Additional information on how to edit the survey (such as removing the heart rate variability or changing the habits), YourOS dashboard functioning as well as advanced configuration options and design customizations are included in the Handbook.

YourOS Essentials

Welcome to YourOS.

In this video, we will have a walkthrough of the key functions of YourOS.

I recommend reading also the handbook as a complementary guide.

YourOS consists of four integrated components:

1. A Personal knowledge management system
2. A Journaling system with periodic reviews (weekly, monthly, quarterly, annual) and a well-being analytics system (dashboards)
3. A task and Project & Goals manager (as YourOS aims to be a practical tool there is no distinction between project and goals)
4. A financial tracker system

We will now start exploring the home page.

First of all, it is important to notice that, it is normal to see a blank space on some pages. These boxes are meant to include the YourOS Dashboards. If blank, it means a URL is missing. Please follow the YourOS Configuration Video to see how to configure them. Once done, YourOS will look like as presented in this video. The metrics in this Dashboard refer to the trend of the past 7 days compared to the previous 30 days.

Next, there is the task manager, listing the tasks due today. By default, tasks are placed on the page this week. To add a New task simply click command + T from Mac or go to the command palette and click new task. YourOS also features a list of recurring tasks that are listed separately in a note called periodic.

Next, we have projects. YourOS has a practical focus so there is no distinction between projects and goals. When creating a new project you need to specify a few inputs as shown in the video.

These are the project status, the dimension, the priority, the deadline, the year, the quarter, and the project complexity.

Then we have the knowledge base, structured into the six core dimensions of our lives: Health, Mindset, Identity, Financials, Relationships, and Growth. Each dimension can have linked projects, areas of responsibilities, resources, and an archive. People familiar with the concept of the Second Brain will recall the PARA Method. You can add a new area from the command palette menu.

The home page also includes more detailed analytics on your well-being and financial information. To configure the dashboards refer to the YourOS configuration video.

We will now explore the core elements of YourOS listed in the ribbon.

The Journal System comprises daily, weekly, monthly, quarterly, and annual journals. By clicking on the calendar icon with today's date YourOS will create a daily note. The structure of the note is editable by accessing the templates in the dedicated folder. To add a journal entry click Command + E from Mac, or select the command from the command palette, or enter the diary note directly. YourOS features a few sections that are automatically aggregated into the weekly review note.

To create a weekly review note, click on the week number from the calendar on the right sidebar.

Afterward, replace1 with this Monday's date and replace2 with the next Monday's date, in the format year dash month dash day. You can also delete the blue box, namely a callout. YourOS features callouts in all the core pages to guide how to use them.

Reviews are automatically generated by gathering the data input in the daily journal and are structured into the six dimensions of YourOS.

These are Health, Mindset, Growth, Relationships, Financials and Identity. So reviews have a section per each dimension combined with the dashboards. This helps you to have diary input, well-being, and financial data in one place.

The final section of the weekly review note is an area for planning the next week. Weekly priorities included here can be copied and replaced with the ones of today's note. Before doing so remember to copy the past weeks' priorities to reflect on the achievements.

You can use this time to also map out the tasks for the past week and archive the tasks completed by moving them to the tasks log. You are done, you have now reflected on the past week by reviewing your project, well-being a financial data. You also planned for the next week. You may want to use the calendar included in YourOS to schedule when to do the key tasks, this planning process is crucial to motivate you to commit to completing each activity.

To create a monthly, quarterly, or annual note, simply create a new note, add the template, and move it to this year's folder. Rename the note with the respective week, monthly, or quarter number.

Now let's go back to the daily journal.

You can log your well-being data and financial transactions simply by compiling the two surveys included on the daily journal page. Follow the steps of the configuration video to configure them properly.

After sending a survey click on the Google Looker icon and refresh the data. By default, Google Looker rephrases the data every 15 minutes.

Use the final section of the journal to plan your next day or review past diary entries on the same day over the years.

Now we will explore other core areas of YourOS.

The Today page shows the activities due today. It also includes the weekly priorities shown in the daily journal.

This page shows the active projects in the short-term (next 12 months), mid-term (next 2-4 years), and long-term (>5 years). Completed projects will appear in the  Museum.

As your Health Data Hub, this page shows your well-being and lifestyle analytics dashboards.

The studio space works as a digital office to process notes and find focus.

Financials allow you to monitor your finances and log new transactions.

The Harbour page is your safe box when you need some relief. Honor your dear ones, listen to the music you love, read affirmations, or see pictures of your favorite places. The ideas on how to use this section are countless.

The YourOS ribbon includes a few commands, such as starting an audio recording, creating a new canvas, opening the command palette, and the quick

switcher to change a note, or a random note. The YourOS Handbook is always accessible from the dedicated button.

Finally, YourOS includes a few more commands to help you get your life organized, such as creating a new person note, a meeting note, or adding an item to the wish list note.
